SUMMARY

Machine Learning Engineer with 3.5+ years of experience applying AI in real-world systems across computer vision, NLP, and generative models. Skilled in Python, TensorFlow, and OpenCV, with a strong focus on practical deployment, rapid prototyping, and AI-assisted robotics. Exceptional communicator able to get ideas across from technical to non-technical personnel.

EXPERIENCE

LeLu Labs

Jan. 2025 – Mar. 2025

AI/ML Intern

Melbourne, VIC

- Engineered data flow architectures to integrate voice and gesture recognition modules for AI robotics.
- Managed data ingestion and processing pipelines for multiple proof-of-concept models, ensuring low-latency data retrieval for real-time robotic responses.

Elektron Consulting

Dec. 2024 – Jan. 2025

Information Technology Graduate Intern

Melbourne, VIC

- Developed end-to-end data integration pipelines for AI-driven applications, including a home assistant and a healthcare companion app.
- Optimized data querying and storage solutions to support seamless application performance and user data management.

Velkur Management Consulting

Feb. 2024 – May 2024

Jr. Machine Learning Engineer

Bengaluru, IN

- Architected and deployed end-to-end RAG (Retrieval-Augmented Generation) data pipelines using Llama Index to support enterprise AI tools.
- Streamlined unstructured data extraction and processing workflows for complex KPO documentation, directly reducing employee task completion time by 23%.

Buymore Analytix

Aug. 2023 – Dec. 2023

Machine Learning Engineer - I

Bengaluru, IN

- Designed data extraction and transformation pipelines for large-scale e-commerce image and text data.
- Integrated complex, multi-source data streams into Tableau to build automated, visual reporting systems for aspect-based sentiment analysis.

Buymore Analytix

May 2023 – Aug. 2023

Data Analyst Intern

Bengaluru, IN

- Built robust ETL pipelines utilizing Tableau Prep and Python (Pandas) to process and clean massive e-commerce datasets for client analytics.
- Engineered a new relational data model and database schema to support advanced Sales Forecasting, significantly improving the accuracy of business intelligence dashboards.

Basaveshwar Consultancy Services

Oct. 2020 – Oct. 2021

Freelance Software Engineer

Bengaluru, IN

- Developed automated data collection and classification pipelines using Python.
- Successfully integrated local applications with cloud storage solutions to ensure secure, scalable, and continuous data flow.

Brillio

Aug. 2019 – May 2020

Data Engineer

Bengaluru, IN

- Validated the integrity of large-scale enterprise data pipelines using Teradata, SQL, and Putty.
- Played a critical role in facilitating a major data lake rehydration project, ensuring strict data consistency and reliability across the pipeline.

PROJECTS & HACKATHONS

IBM Gen AI Hackathon 1st Place	2025
Built the data retrieval and processing architecture for an AI-driven investment portfolio generator.	
GovHack Hackathon	2024
Engineered a data ingestion and visualization pipeline to analyze student housing data and urban population metrics, creating an interactive dashboard for city planning.	
Facial Recognition Based Automation Management with Cloud Storage	2019
Developed a data pipeline capturing and routing facial recognition data directly to scalable cloud storage solutions.	

EDUCATION

Deakin University	Jul. 2024 – Present
<i>Master of Data Science (Professional)</i>	Melbourne, Australia
Specialization: Cyber Security and Deep Learning Research: Currently researching "Quantum Deep Reinforcement Learning in Satellite Internet" under the supervision of Dr. Shiva, working with advanced Satellite Communication.	
International Institute of Information Technology (IIIT)	Apr. 2021 – May 2022
<i>Executive Post Graduate Diploma in AI and Machine Learning</i>	Bangalore, IN
Style Transfer Using GAN (May 2022): Built a Generative adversarial model(modified U-Net) which can generate artificial MRI images of different contrast levels from existing MRI scans. Profit Maximizing Cabs (Mar 2021): Used Reinforcement Learning to build a Deep RL model for maximize profits for drivers by finding optimal paths for driving and get optimal number of rides in a day. Gesture Recognition (Dec 2021): Built a 3D Convolutional Network based on a combination of Convolutional Neural Network and Recurrent Neural network to detect gestures from a video or live stream.	
Nitte Meenakshi Institute of Technology	Aug. 2015 – Dec. 2019
<i>Bachelor of Engineering, Computer Science & Engineering</i>	Bangalore, IN

SKILLS

Data Engineering : Data Pipelines, ETL Frameworks, Data Warehousing, Relational/ NoSQL Database Design, Data Integration, RAG Pipeline Architecture
Languages : Python, SQL, PySpark, C++, JavaScript
Databases : PostgreSQL, MySQL, MongoDB, DynamoDB, Teradata
Cloud & Tools : AWS, Azure, Git, Tableau Prep, Tableau Desktop, Linux/Putty

PUBLICATIONS

Published a research paper titled " Facial Recognition Based Automation Management with Cloud Storage", in IJIRSET, Vol 8, Issue 3, March 2019.
